

CHIROPRACTIC HOME EXERCISE PROGRAM

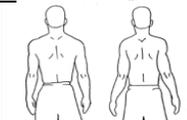

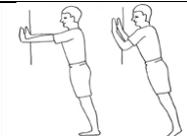

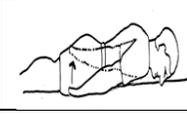

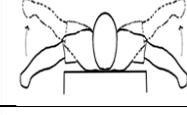

The following exercises are provided to enhance your chiropractic care by restoring range of motion and strengthening stabilizing spinal muscles. Please be sure to perform these exercises slowly and controlled to avoid further injury. Here are some important things to remember for a successful program:

- The programs are designed in phases and arranged according to spinal levels. Phase 1 focuses on range of motion. Phase 2 is an intermediate phase. Phase 3 focuses on stabilization. Start by performing the exercises located under the spinal level where your number one complaint of pain is located.
- If you have moderate to severe pain or are lacking a great deal of motion, start with Phase 1 exercises.
- If you have mild to moderate pain or some limitations in motion, advance to Phase 2. (Perform both Phase 1 and 2.)
- If you have mild pain without any motion limitations, advance to Phase 3. (Perform Phase 1, 2, and 3 exercises.)
- If you experience pain or soreness that persists for more than two hours following exercising, regress to the previous phase of exercises for a few days. Advance when pain/discomfort has subsided.
- Perform these exercises every day, 2-3 times per day.

CERVICAL EXERCISES

Phase 1		Look forward. Bend your head forward, bring chin toward your chest. Hold and count to five. Repeat 10 times.
		Look forward. Bend your head back, look toward ceiling. Hold and count to five. Repeat 10 times.
		Look forward. Slowly look to the right. Hold and count to five. Repeat 10 times. Repeat steps looking to the left.
Phase 2		Look forward. Tilt your head so that your ear moves toward your shoulder. Hold for 30 seconds. Repeat other side.
		Turn head and look in the direction of your armpit. Hold for 30 seconds. Repeat on the other side. For an aggressive stretch, place hand on the top of your head and gently pull.
		Look forward. Retract head back keeping chin and eyes level. Hold for five seconds. Repeat 10 times. (Also for Posture)
Phase 3		Place palm against forehead. Gently push forehead into your palm. Hold for five seconds. Repeat 10 times.
		Place palm behind your head. Gently press back of your head into your palm. Hold for five seconds. Repeat 10 times.
		Place palm at the side of your temple. Gently push head into your palm. Hold for five seconds. Repeat 10 times.

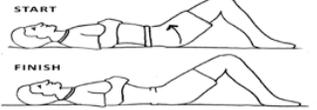

THORACIC EXERCISES

Phase 1		Sitting, reach across your body toward the opposite side of the chair. Hold 10 seconds. Repeat 10 times. Repeat steps on the other side.
		Press/squeeze shoulder blades together. Hold five seconds. Repeat 10 times.
		Shrug shoulders up toward ears. Hold five seconds. Repeat 10 times.
Phase 2		Lie down with arms behind head and elbows out. Push elbows down into the surface. Hold five seconds. Repeat 10 times. *If elbows do not touch the surface, place pillow or towel underneath elbows. (Also for Posture)
		Stand arm's length from a wall with arms shoulder length apart. Press body into wall as if you are doing a push up. Hold five seconds. Repeat 10 times.
		Lie down with arm extended toward ceiling. Keep elbow straight and punch up toward ceiling. Hold five seconds. Repeat 10 times. *Add light weights when able.
		Lie on stomach, arms at side. Lift arms up. Hold five seconds. Repeat 10 times. *Add light weights when able.
		Lie on stomach, arms out to side. Lift arms up – squeeze between shoulder blades. Hold five seconds. Repeat 10 times. *Add light weights when able.
		Lie on stomach, arms out straight above head, with thumbs up toward ceiling. Lift arms up from the floor. Hold five seconds. Repeat 10 times. *Add light weights when able.

CHIROPRACTIC HOME EXERCISE PROGRAM - (CONTINUED)

- If you have moderate to severe pain or are lacking a great deal of motion, start with Phase 1 exercises.
- If you have mild to moderate pain or have some limitations in motion, advance to Phase 2. (Perform Phase 1 and 2.)
- If you have mild pain without any motion limitations, advance to Phase 3. (Perform Phases 1, 2, and 3 exercises.)
- If you experience pain or soreness that persists for more than two hours following exercising, regress to the previous phase of exercises for a few days. Advance when pain/discomfort has subsided.
- Perform these exercises every day, 2-3 times per day.

LUMBAR EXERCISES

Phase 1		Lie on back with both legs straight. Lift one leg to chest. Hold 30 seconds. Repeat on other side.
		Lie on back. Bring both legs up to chest. Hold 30 seconds.
		Lie on back with knees bent and together. Slowly rotate legs side to side in a pain free range of motion. Repeat 10 times.
Phase 2		Lie on back with legs straight. Bring one knee up and hold behind knee. Slowly raise foot toward ceiling. Hold 30 seconds. Now move ankle back and forth.
		Lie with both knees bent. Tighten abdominals and buttocks and press lower back into surface. Hold five seconds. Repeat 10 times.
		Lie with both knees bent. Lift buttocks off surface. Hold five seconds. Repeat 10 times.
Phase 3		Lie with knees bent. Push right hand into right knee and meet resistance. Hold five seconds. Repeat 10 times. Also perform this exercise on the left side. <i>*You can also push your hand into the opposite knee. (i.e. Right hand into left knee)</i>
		Lie with knees bent. Bring one knee up to position while keeping low back pressed into surface. Hold five seconds. Switch legs. Perform 10 times.
		Lie on your stomach. Raise body up onto elbows and toes as shown. Hold 15-30 seconds. Repeat five times. <i>*Easier = Raise body up on elbows and knees. Harder = Extend arms.</i>

POSTURE EXERCISES

	Position yourself against a wall. Make sure the back of your head is touching the wall, but keep your chin level. Press both shoulders into the wall. Now keeping yourself in this position, slowly take one step away from the wall. This is good posture! Try to hold this posture for as long as you can.
	To help improve your posture when you are in a sitting position, place a rolled up towel behind your low back. This will help your pelvis tilt forward which will help bring your shoulders back in better alignment. Even though the towel roll will help attain the correct position, remember that you are still the one that needs to try to sit with proper posture!
